

Homeowners please be advised:

We have had some repairs done to the irrigation large pond pump. The water to irrigate this area comes from the pond. The pump failed and was repaired on August 1-2. With scheduling and availability this was the soonest we could have it repaired. The irrigation was out four to five weeks.

The landscape team is now working on the irrigation system to make sure it is operating properly. The sprinklers in this area will be on at different times while they check and repair the system. They have increased the watering times to get the area back into shape as soon as possible.

Please be careful if using the grassy area near the pond. The drying out of the turf and the returning water may cause trip hazards. Thank you.

Enjoy your day!
